

## **Acronis True Image 2020**

Complete cyber protection comes from features that simultaneously address the safety, accessibility, privacy, authenticity, and safety of your data.

### **Dual Protection**

Replicate your local backup in the cloud\* automatically so you always have an off-site copy available for recovery. Automates your 3-2-1 backup strategy, completing the backup and replication simultaneously.

### **Full Image Backup**

Protect everything to recover anything. Having a mirror image of your system disk or a selected partition means you can easily recover whatever you need – from your full system to an individual file or folder.

### **File and Folder Backups**

Control the nature of your backups. Select individual files and folders that you want specific replicas of when you don't want a full image copy.

### **Office 365 Backup**

Create direct cloud-to-cloud backups of your Office 365 account, including the emails and attachments from your Outlook.com mailbox and all of the files and folders in your OneDrive.

### **Active Disk Cloning**

Make an exact replica of a Windows or Mac system while it's in use, without having to stop and reboot. The easiest way to migrate your data – OS, files, applications, and settings – to a larger or faster disk.

### **Acronis Survival Kit**

Create an all-in-one recovery tool on an external drive that contains everything you need to restart your system, including the required boot media and full image backups of your entire system.
